PRJT302 | GROUP 12

CampusVoice

A chatbot that answers student problems from university policy and routes each report to the right office

Prototype for the paper â€œEnhancing Chatbot-Based Reporting of Development Challenges in Higher Learningâ€

Students

- Open the chat with no account
- Describe a problem in everyday words
- Get an answer grounded in policy

Staff

- Sign in to a private dashboard
- View and update student reports
- Compare model performance

From message to the right office

1

Describe the problem

Typos are fine. Personal numbers are masked.

2

Route to an office

A deep learning classifier picks the office and the urgency.

3

Answer from policy

RAG grounds the reply in official university documents.

4

Staff follow up

Urgent, formal or unclear reports are escalated to a person.

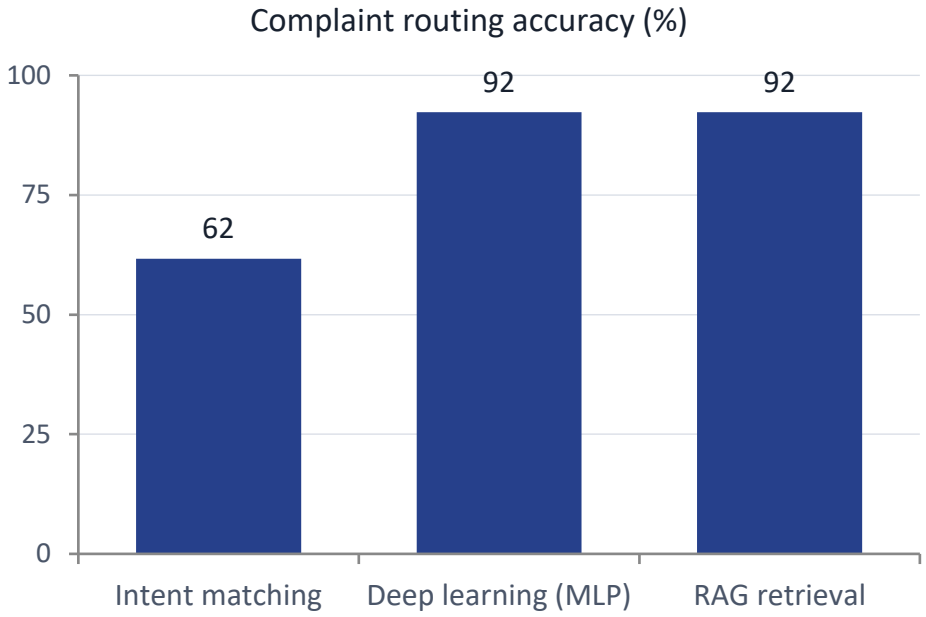

Five offices

Academic · Finance · ICT · Facilities · Hostel

Staff response targets

4 h	24 h	3 days	5 days
Critical	High	Medium	Low

How well the models perform

Synthetic complaints dataset, 781 training and 196 test complaints

92%

of test complaints reach the correct office with the deep learning and RAG models

Predicting chatbot adoption

On 131 survey responses, RAG reaches 42% accuracy against a 40.5% majority baseline. LLM results are pending: no LLM is configured yet.
